

## IDEAS OF SMART MOBILITY IN POZZALLO

Smart mobility is synonymous with smart digital and inclusive cities, with ultimate goal of making movements more efficient and less polluting.

Urban mobility in Pozzallo can be innovated through new technologies capable of integrating public transport such as car sharing or vehicle sharing.

The following requirements are necessary to promote intelligent mobility in Pozzallo:

- Flexibility: various transport mobility that orders those who move, the one who best satisfies them
- Efficiency: the traveller must arrive at his destination as quickly as possible;
- Clean technologies: elimination of vehicles that cause pollution, an introduction of zero emission vehicles;
- Security: reduction of road accidents;
- Accessibility: every one must have access to the services offered by sustainable mobility;
- Social Benefit: Intelligent mobility must guarantee an improvement in the quality of life here are 3 alternative mobility models:
  1. Bicycle commuting or bike sharing: the use of bicycles for those who must travel a few kilometers;
  2. Car sharing and scooter sharing
  3. Service on request like Uber or Lyft, which requires you to call a rental car through an application.

In the future of Pozzallo like a smart city what is not be missed is an electric car that uses electricity to recharge it, and not petrol or other fuels used in a cars.

To do all this we will start to involve our local politicians and the mayor showing them the ideas coming from this project and the website we are going to create.
